

Cut along outer grey lines, fold along middle grey line.

Have child sign name.

Give as is, or tape around a lollipop, pencil, or other trinket.

 Lungs transport oxygen into your bloodstream.

 Most vertebrate animals have two lungs.

 In humans, the left lung is separated into two lobes and the right lung is separated into three lobes.

 The study of lung disease is known as pulmonology.

from:

-  You can lead a relatively normal life with just one lung.
-  The average person breathes in around 11000 litres of air everyday.
-  You can increase your lung capacity with regular exercise.
-  Common lung diseases are asthma, pneumonia, emphysema, tuberculosis, and bronchitis.

from:

 Lungs expel carbon dioxide when you breathe out.

 In humans, the left lung is slightly smaller than the right lung, to allow more room for the heart.

 When resting, the average adult breathes 12-20 times a minute.

 Asthma is a common respiratory condition that effects the lungs and airways
